LATVIJAS ŪNIVERSITĀTES METEOROLOĢISKĀS OBSERVATORIJAS NOVĒROJUMI.

II. un III. gads, 1925. un 1926.

Meteoroloģiskā Instituta direktors R. Meyer.

Ievads.

Novērojumi vispār turpināti bez pārmaiņām tā, kā iesākti iepriekšējā Observatorijas darbības pirmajā gadā. Attiecībā uz novērojumu apstrādājumiem un publicēšanu jāaizrāda uz pirmo gadgāju. Ievērojama pārgrozība pastāv tikai saules spīdēšanas ilguma un ikstundu gaisa spiediena vērtību mēnešu tabulu izpalikšanā. Līdzekļu trūkums un reizē ar to publicēšanas nokavēšanos darīja šo ierobežojumu neizbēgamu. Pastāv nodoms minētās tabulas kā arī citu novērošanas materiālu publicēt citādā veidā.

Pie pirmā gadgāja ievadraksta jāpiezīmē sekošo.

Temperatūra. Līdz 1925. g. 21. augustam lietoja F. O. Müller'a termometru Nr. 7220, bet pēc tam Fuess'a termometru Nr. 7408. Termometru korekcijas ir bijušas zem 0,1°. Līdz 1925. g. 27. aprīlim plkst. 7. un no 1926. g. 13. janvāra plkst. 7. līdz 1926. g. 24. janvārim plkst. 13. lietoja Richard'a termogرافu Nr. 11339; no 1926. g. 10. janvāra plkst. 19. līdz 1926. g. 13. janvārim plkst. 7. reģistrācija nenotika; pārējā laikā strādāja Richard'a termogرافs Nr. 34985 bez sevišķiem traucējumiem.

Kā ekstremtermometrus lietoja: Fuess'a maksimālo termometru Nr. 10880, un minimālus termometrus Nr. 9324 (Fuess) līdz 1925. g. 27. februārim un pēc tam Nr. 9791 (Fuess).

Izdarot kārtējus novērojumus 1926. gadā atzīmēja arī nolasījumus pēc Assmann'a aspirācijas termometra (Galv. Pēterp. Obs. Nr. 4841), kas tika piekārts ārpus būdas vietas ēnā. Pēc tā un parasta termometra būdā nolasīto temperatūru starpība nevienā mēnesī nerasniedza 0,1°. Tabulās dotas temperatūras, kas nolasītas būdā pēc termometra bez aspiratora.

Mitrumi. 1925. gadā lietoja to pašu saslapināto termometru, kā 1924. g. No 1926. g. 1. janvāra nolasīja pēc Fuess'a saslapināto termometru Nr. 7407, kas tika uzvilks 3 līdz 5 minūtes pirms nolasīšanas. Līdz 1926. g. 13. jūnijam plkst. 7. lietoja Pēterpils Galv. Observatorijas higrometru Nr. 5053, bet pēc tam Pēterpils Galv. Obs. higrometru Nr. 292. Relatīvo mitrumu reģistrēja Neugebauer'a

higrografs Nr. 41 ar pārtraukumu no 1925. g. 14. janvāra plkst. 1 līdz 16. janvārim plkst. 7.

Saules spīdēšanas ilgums. Mērojami izdarīti tāpat, kā pirmā gadā; novērojumu apstākļi grozījās no 1925. gada, kad Unijas elektriskā iestāde pārtrauca darbību un dūmi vairs netraucēja.

Vējš. Wild'a vēja karogs tika labots no 1925. g. 13. oktobrim līdz 2. novembrim. 1925. gadā 29. oktobrī uzstādīja. Fuess'a elektriski reģistrējošo anemografu. Viņš atrodas uz stipra, ar stiepulēm piestiprināta masta 5,45 m augstumā I. gadgāja zīmējuma redzama laborātorijas ēkas jumta firsta vidū.

Zemes temperatūra. Temperatūras nolasīja 0,1, 0,2, 0,4, 0,8 un 1,6 m dziļumā pēc zemes termometriem ebonīta caurulēs. Mērījumi 0,1 m dziļumā iesākie 1925. g. 1. februārī aiz I. gadgāja minētiem iemesliem. Lietoja Müller'a termometrus Nr. 691 (0,1 m); Nr. 1690 līdz 1. februārim, bet pēc tam Nr. 690 (0,2 m), Nr. 140 līdz 1. februārim, pēc tam — Nr. 689 (0,4 m); Nr. 185 (0,8 m); Nr. 3 (1,6 m). Līdz 0,4 m dziļumam zeme sastāv no smiltīm ar tumusa un gruvēju piemaisījuma, bet dziļāk gandrīz tikai no smiltīm. Koku laipa uz ziemeļiem no termometriem atļauj ziemā novērot, neaizskarot sniega segu.

Novērojumus un viņu apstrādāšanu pa lielākaī daļai izdarīja G. Baumaņa kgs. 1925. gadā novērojumos piedalījās V. Heinrichsena kgs līdz 1. jūnijam, bet augustā un septembrī stud. R. Kipurs. 1926. gadā no 1. maijam novērojumos piedalījās P. Putniņš.

BEOBSACHTUNGEN DES METEOROLOGISCHEN OBSERVATORIUMS DER LETTLÄNDISCHEN UNIVERSITÄT.

II. und III. Jahrgang. 1925 und 1926.

Direktor des Meteorologischen Instituts R. Meyer.

Die Beobachtungen wurden im allgemeinen unverändert in der Art fortgesetzt, wie sie im ersten Jahre der Tätigkeit des Observatoriums begonnen waren. Auch in Bezug auf die Verarbeitung der Beobachtungen und ihre Veröffentlichung kann auf den ersten Jahrgang verwiesen werden. Eine wesentliche Änderung bedeutet nur der Fortfall der Monatstabellen der Sonnenscheindauer und der stündlichen Werte des Luftdrucks. Diese Einschränkung war im Hinblick auf die knappen für die Drucklegung verfügbaren Mittel und die eben hierdurch bedingt ohnehin grosse Verspätung des Druckes unvermeidlich. Es liegt die Absicht vor, die genannten Tabellen und einiges weitere Beobachtungsmaterial in anderer Weise zu veröffentlichen.

Zu der im I. Jahrgang gegebenen Einleitung sind folgende ergänzende Bemerkungen zu machen.

Temperatur. Bis zum 21. August 1925 war das Thermometer Nr. 7220 (F. O. Müller) im Gebrauch, von da an das Thermometer Nr. 7408 (Fuess). Die Korrekturen beider Thermometer lagen unter $0,1^{\circ}$. Bis zum 27. April 1925 um 7 Uhr und später von 7 Uhr am 13. Januar 1926 in bis 13 Uhr am 24. Januar desselben Jahres war der Thermograph Nr. 11339 (Richard) im Gebrauch; vom 10. Januar 1926 um 19 Uhr bis zum 13. Januar desselben Jahres um 7 Uhr fanden keine Registrierungen statt; während der gesamten übrigen Zeit hat der Thermograph Nr. 34985 (Richard) befriedigend gearbeitet.

Als Extremthermometer wurden benutzt: das Maximalthermometer 10880 (Fuess), das auch im Jahre 1924 vom 18. August an im Gebrauch war, aber durch ein Versehen im Jahrgang I. nicht genannt worden ist, und folgende Minimalthermometer: bis zum 27. Februar 1925 — Nr. 9324 (Fuess) und von da ab — Nr. 9791 (Fuess).

Im Jahre 1926 wurden bei allen Terminbeobachtungen auch Ablesungen an einem Assmannschen Aspirationsthermometer Nr. 4841 (Hauptobserv. Petersburg) gemacht, das aussen an der Hütte auf ihrer Schattenseite aufgehängt wurde. Die mittlere Differenz zwi-

schen dem Hüttenthermometer und dem Aspirationsthermometer erreichte in keinem Monat den Wert von $0,1^{\circ}$. In den Monatstabellen sind immer die am nicht aspirierten Hüttenthermometer abgelesenen Temperaturen angegeben.

Feuchtigkeit. Im Jahre 1925 wurde als feuchtes Thermometer dasselbe Instrument benutzt wie 1924. Vom 1. Januar 1926 an wurde das feuchte Thermometer Nr. 7407 (Fuess) 3 bis 5 Minuten von der Ablesung mit einem Fuess'schen Aspirator ventiliert.

Bis zum 13. Juni 1926 um 7 Uhr wurde das Haarhygrometer Nr. 5053 (Hauptobserv. Petersburg) benutzt, von da an — das Haarhygrometer Nr. 292 (Hauptobserv. Petersburg). Ausserdem wurde die relative Feuchtigkeit durch einen Hygrographen Nr. 41 (Neugebauer) registriert; eine Unterbrechung trat nur in der Zeit vom 14. Januar 1925 um 1 Uhr bis zum 16. Januar um 7 Uhr desselben Jahres ein.

Dauer des Sonnenscheins. Die Messungen erfolgten wie im ersten Jahre, doch haben sich die Beobachtungsbedingungen verändert dadurch, dass das im I. Jahrgang erwähnte Elektrizitätswerk der Union seinen Betrieb im Jahre 1925 einstellte, und der Rauch sich somit nicht mehr störend geltend machen konnte.

Wind. Die Wildsche Windfahne war vom 31. Oktober bis zum 2. November 1925 in Reparatur. Am 29. Oktober desselben Jahres wurde ein elektrisch registrierender Anemograph von Fuess aufgestellt. Er befindet sich auf einem starken, durch Spanndrähte befestigten Mast von 5,45 m Höhe genau über der Mitte des auf dem Plan im I. Jahresbericht dargestellten vorderen Dachfirstes des Laboratoriumsgebäudes.

Bodentemperaturen. Es wurde die Temperaturen in 0,1, 0,2, 0,4, 0,8 und 1,6 m Tiefe mit Bodenthermometern in Ebonit-röhren gemessen. Die Messungen in 0,1 m Tiefe begannen wegen der im I. Jahrgang erwähnten Störung erst am 1. Februar 1925. Benutzt wurden die Thermometer von O. Müller: Nr. 691 (0,1 m); Nr. 1690 bis zum 1. Februar 1925, von da ab Nr. 690 (0,2 m); Nr. 140 bis zum 1. Februar 1925 und von da ab Nr. 689 (0,4 m); Nr. 185 (0,8 m); Nr. 3 (1,6 m). Bis zur Tiefe von 0,4 m etwa besteht der Boden aus Sand mit Beimengungen von Humus und Schutt, in grösserer Tiefe aber fast nur noch aus Sand. Durch einen Holzsteg an der Nordseite der Thermometer wurde es ermöglicht, die Beobachtungen im Winter auszuführen, ohne das die Schneedecke festgetreten wurde.

Die Beobachtungen und ihre Bearbeitung wurden zum grössten Teil von Herrn G. Bauman ausgeführt. Im Jahre 1925 nahm bis zum 1. Juni Herr W. Heinrichsen und in den Monaten August und September desselben Jahres — stud. R. Ķipurs an den Beobachtungen teil. Im Jahre 1926 beteiligte sich stud. P. Putnins seit dem 1. Mai an den Beobachtungen.
